

docarchiver™

Convert database docs to PDF/A for long-term archiving. Give your documents the ease-of-use of electronic files and the reliability of paper & microfiche.

Why PDF/A?

PDF/A is the best format available for the preservation of your database documents. The PDF/A format is actually a valid PDF file, with some built-in features to guarantee that your documents will view and print correctly now, and forever. PDF/A is as reliable and secure as TIFF and microfiche, but also provides the ease of use, and accessibility of electronic documents. PDF/A is an ISO standard for long-term archiving of documents into PDF format. With CVISION's DocArchiver you can safely and securely convert all image and PDF source documents into PDF-archivable files. Want your corporate documents to last forever? Convert to PDF/A!

Electronic Document Archiving

Electronic files transmit faster, copy with no expense, and are easy to search and access over the Web. But will an electronic file display and print years from now? Will your electronic files always look the same? Maybe certain required fonts are missing? Maybe the document does not display due to embedded JavaScript that cannot run on your server?

Enter PDF/A - a file format with all the ease-of-use of an electronic file and the reliability of paper & microfiche. With PDF/A you can be secure in the knowledge that all your database documents will look identical years from now. You want a guarantee that your files will always open, view, and print the same - now, tomorrow, and forever. Search no more. PDF/A is the answer!

“That's preserved!”

DocArchiver: The PDF/A guarantee

CVISION DocArchiver is a server-based PDF/A production module for long-term archiving of database documents. Designed for archive users, corporate databases, and document management systems, DocArchiver enables the verification and correction of documents into PDF/A format according to ISO 19005-1. With DocArchiver, non-compliant PDF files can be converted into valid PDF/A documents with the touch of a button.

Trust is good Control is better

A crucial factor in the ultimate success of any document archiving system is the ability to access the archived documents years later with no loss of information.

DocArchiver is based on a set of tools that have been tested over the years. It has been selected by Adobe since 2003 for integration into Acrobat Professional as the “Preflight” function. This verification function, which guarantees the long-term accuracy of your corporate documents, is now available for use in CVISION's DocArchiver. DocArchiver is tailored to server-based, PDF/A production. A clearly set out verification report indicates in seconds whether your PDF documents to be archived are PDF/A compliant or not. If documents are not PDF/A compliant, DocArchiver can automatically repair them.

Why take chances with your corporate documents? Give CVISION DocArchiver a test drive today!

Advantages

- Verify and repair non PDF/A compliant PDFs - repairs PDFs that Acrobat cannot fix
- More reliable, and easier to access than microfiche
- Analyze each PDF quickly and systematically for compliance to the ISO PDF/A standard
- Embed all missing fonts to avoid document display errors
- Minimize risk during archiving electronic documents by strict compliance to the PDF/A standard
- Available on server level for batch PDF/A conversion
- Convert TIFFs to text-searchable PDF/A documents - with optional PdfMaestro
- Convert captured or electronic documents into PDF/A - with optional OfficePDF
- Optimize existing PDFs to PDF/A for long-term archiving
- Can be easily installed on several workstations company-wide
- Optimal for quality assurance during PDF document production

DocArchiver Server is available for batch, server-based document processing. CVISION also provides DocArchiver as a command line module for seamless integration into existing document management and workflow systems for automated long-term archiving. **Adobe Acrobat Plug-in:** DocArchiver is available for interactive use as a plug-in for Adobe Acrobat.
